SCHULZ

Copper Craftmanship.

SCHULZ brewing technology:
innovation since 1677

At SCHULZ, the rare art of copper forging lives on as part of our range of services to you. The copper-covered towers of the Bamberg Cathedral bear witness not only to the success of the company, but also to the founder's coppersmith origins. Today, SCHULZ is ushering the tradition of copper craftsmanship into the future as one of the few companies to practice their skill in the art. Customers both at home and abroad appreciate the aesthetic and technical excellence of our copper workmanship, available for entire brewery plants as well as single elements, such as copper domes.

As the oldest supplier of brewing plant in the world, SCHULZ is taking the beer brewing tradition forward into the future. All the expertise that we have amassed over three centuries is channelled into the ongoing development of our technology and products. Sophisticated and globally successful innovations, pioneering patents, sustainable and energy-efficient technology and a unique standard of service combine to make this family company a premium partner for breweries around the world. Find out on the following pages why the world puts its faith in quality products and services from Bamberg. And why your brewery project is in the best hands with SCHULZ.

(left) Back to the future: The oldest brewhouse supplied by schulz and still in active service was built in 1844. And because it is wood fired, it complies with modern carbon-neutral standards. schulz is forging the way ahead with technology developed in house for carbon-neutral brewing, e.g. using biomass biomasse as a fuel

(right) Our experience makes the difference: At SCHULZ, you benefit from genuine expertise that has been amassed over the centuries. (Illustration: coppersmith business around 1928)
